

Sustainability

Our commitment to sustainable products is all encompassing: from finding new resins to reduce materials released into the **environment**, to developing products that can help with **recycling**, to the search for new **bio-based**, **biodegradable** and **compostable** materials that overcome existing application restrictions.

Mono-materials

A great deal of attention is paid to the continuous development of so-called **mono-materials**, i.e. films made from a single resin or a single family of resins, which are easy to recycle and guarantee excellent technical characteristics commonly found in multilayer materials.

Coextruded barrier films PP or PE based, low seal to be laminated with BOPP, BOPE o MDOPE to ease the mechanical recycle.

Available also as:

- Clear and white pigmented
- Peelable

PP coextruded barrier film for Thermoforming applications

Bio Based Films

PE based films produced by renewable sources, gas barrier, coextruded, carbon neutral to be used in lamination.

Available in different thicknesses.
